

Inspired Vending
Thinking of tomorrow, today

About Us

Welcome to our way of vending. With over 28 years experience (blimey, has it been that long?) We introduce an entirely unique way to do business. With increasing emphasis being put on protecting our beautiful planet and our health, looking forwards has never been more important. In light of this, we are looking towards some exciting recycling opportunities and now have 60% healthier alternatives in our Revive product selection. In 2014, we pushed the boundaries and launched Doozy which takes healthier alternatives and recycling to a whole new level, but we'll tell you more about that later. Here is a flavour of what Revive are about.

The Coffee

We love coffee. And we use the best equipment on the market to make sure the coffee experience is delivered in every drink. As for the coffee itself, not only are the beans fair-trade but also eco-roasted.

Simply speaking, that means the used coffee grounds roast the new coffee beans. Mocha, Latte, Americano, which would you choose?

The Yummy Stuff

Snacks, we love 'em, but they aren't always that good for you. As well as being able to offer your staff and customers some of the leading brands, we have worked hard to find the yummiest healthier alternatives out there. We take pride in our menu changes and we are always on the lookout for the next best product!

The Service

Rather than us tell you about our service, we thought you'd like to hear from a customer.

"The University of Portsmouth has a very diverse estate and we were looking for a professional vending company that could offer a first class service, deliver innovation and enhance our student experience in buildings where we are unable to offer delivered catering. Revive tick all those boxes with a fresh and modern take on, not just vending, but the whole experience"

- Nick Leach, Portsmouth University, January, 2018

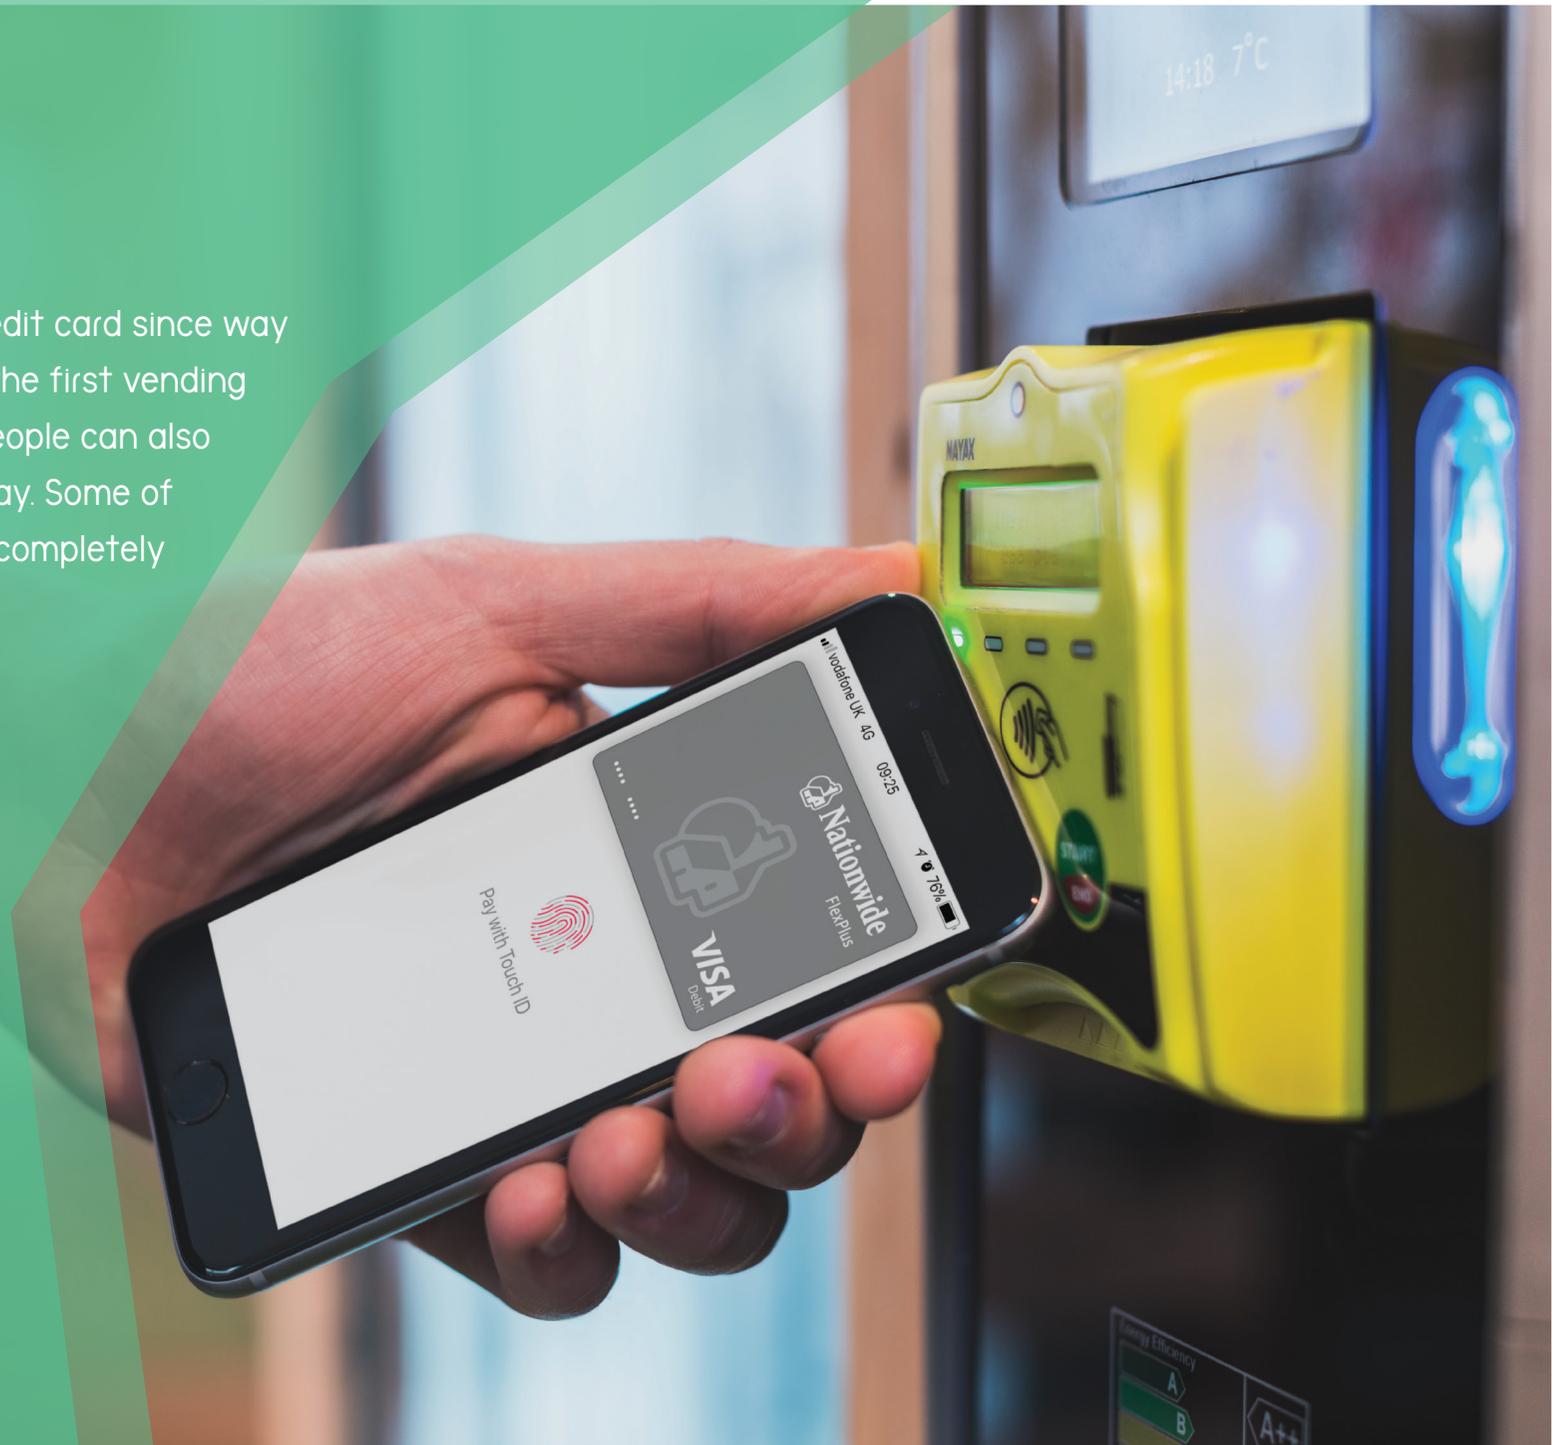

The Tech

Credit card Payments

We've had options to pay by credit card since way back in 2007, making us one of the first vending companies to pioneer it. Now, people can also pay by contactless and apple pay. Some of our customers have even gone completely cashless,

Telemetry

Efficiency is key and all our machines are geared up with telemetry so we can keep track of every transaction. This means machines won't have empty spirals and we are often alerted of any problems before you are.

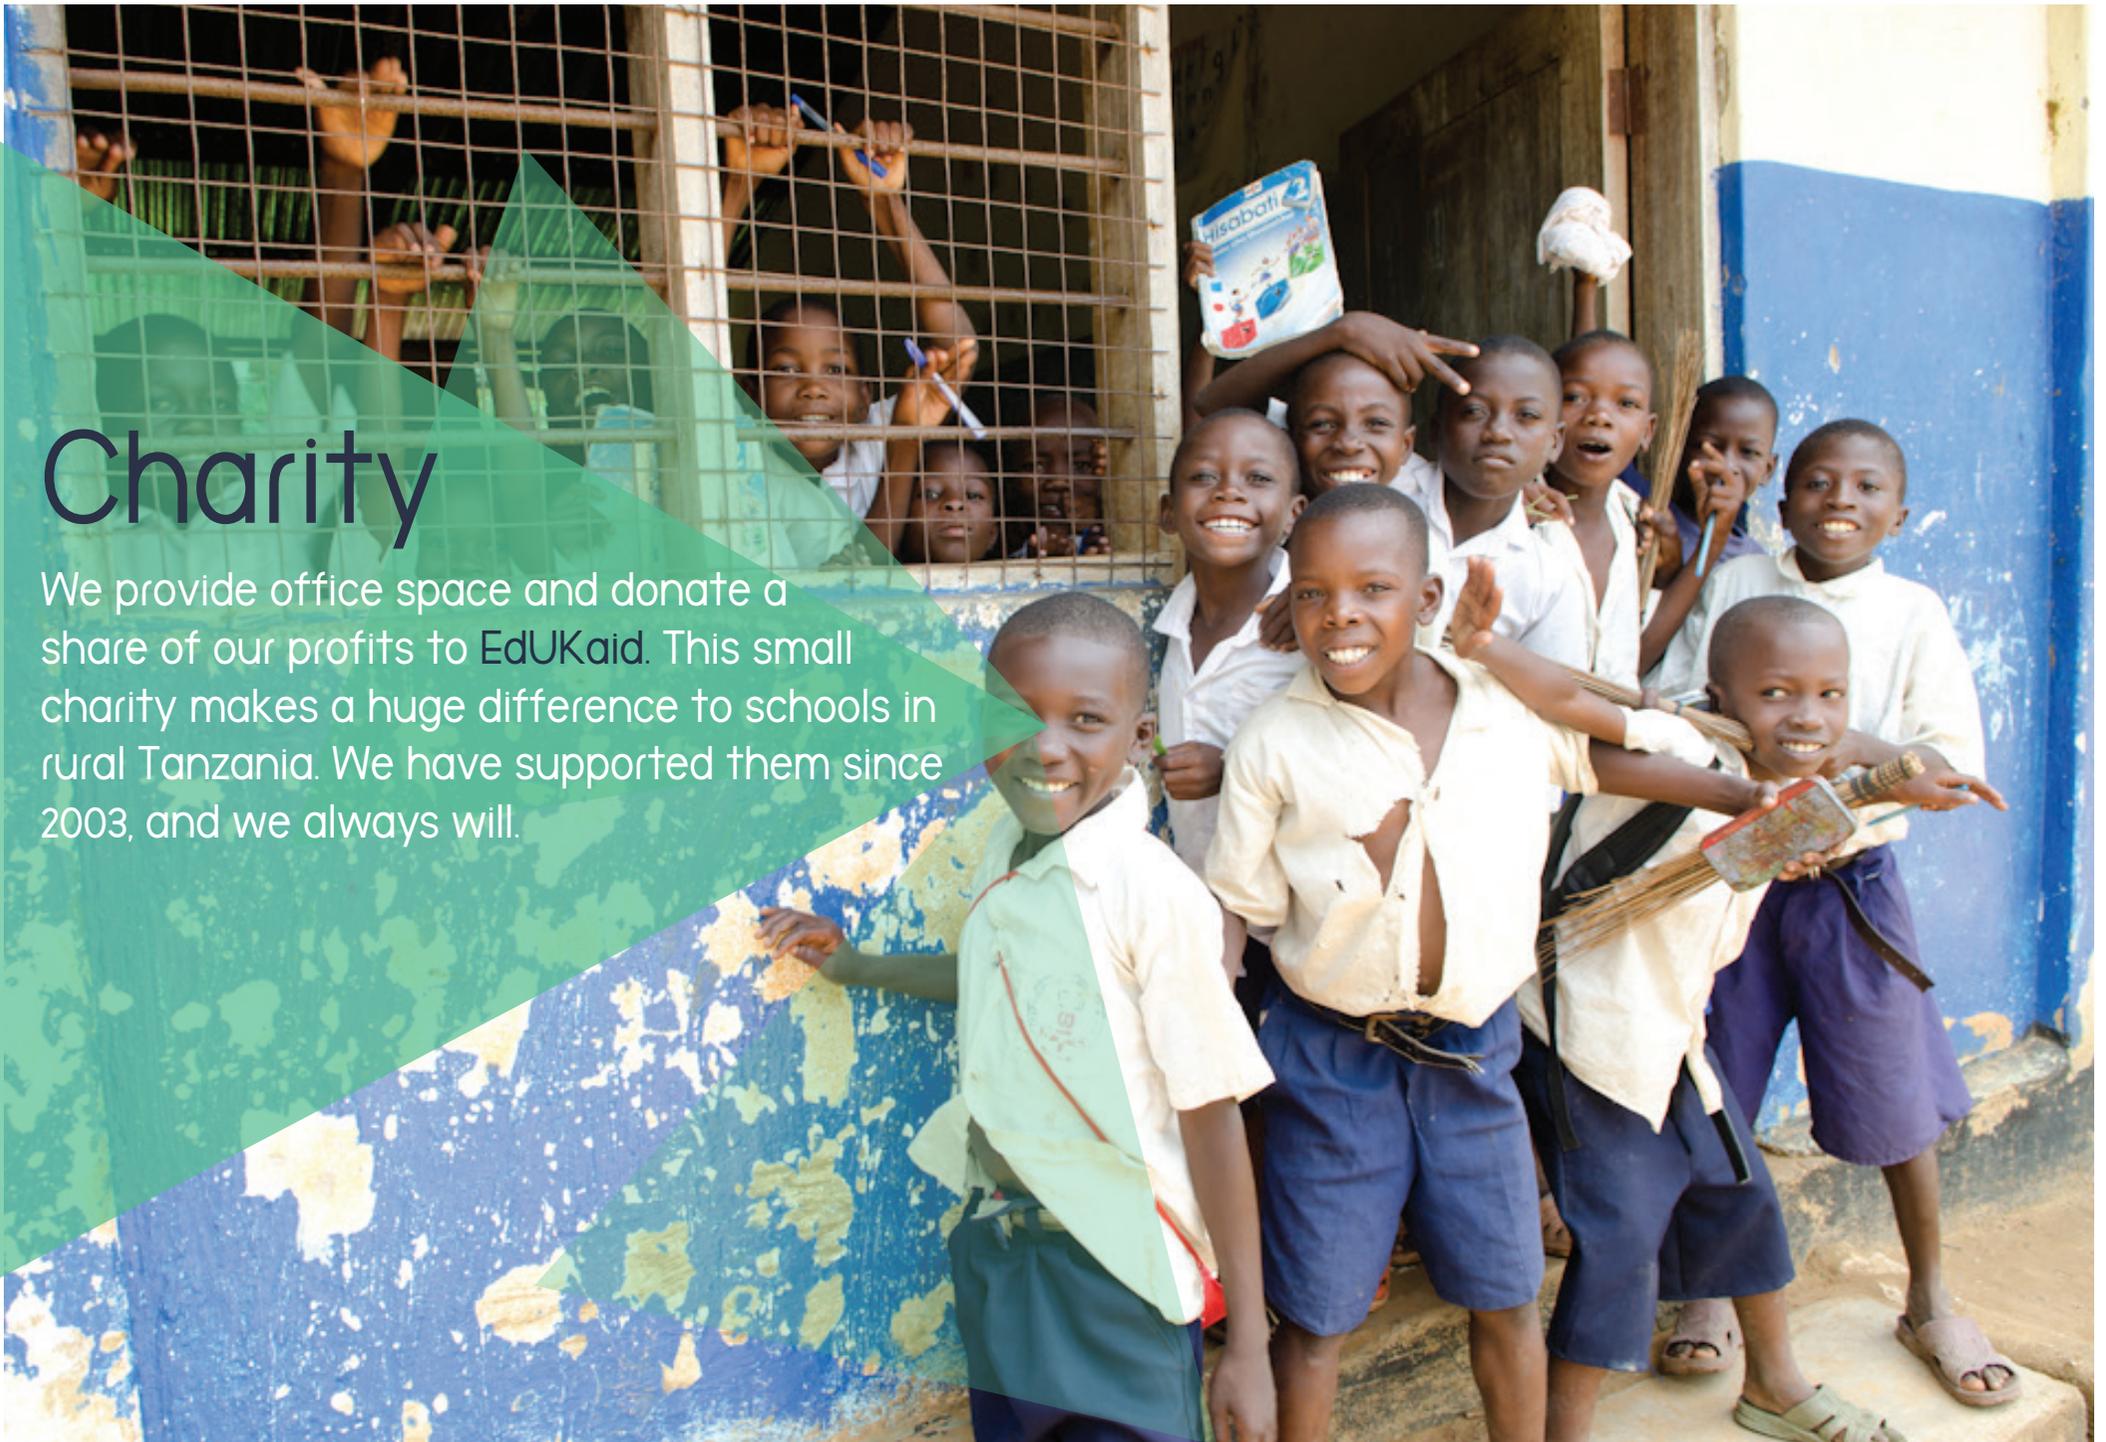

The Look

No two spaces are the same and that's why we design for each location - always the perfect fit. If you have an area in mind, let us know and we can give you an idea of how it could look for you. All we need is a photo and some measurements.

Charity

We provide office space and donate a share of our profits to EdUKaid. This small charity makes a huge difference to schools in rural Tanzania. We have supported them since 2003, and we always will.

We encourage all our staff to use mugs to reduce our office waste

The Environment

The 'war on waste' conversation has swept the nation.

From the possible latte levy to banning straws, everyone is talking about it. People are finally taking protecting the environment seriously, and that is definitely something to celebrate! We have started to work with our partners with the ultimate goal of zero waste. This includes finding ways of recycling cups, plastic and even the used coffee grounds and tea leaves.

Do you remember we mentioned Doozy?

Here's what can happen when you really think outside the box.

Doozy

With 80% healthier alternatives, up-cycled pallet wood surrounds and eco-roast coffee, it is the ultimate vending solution. Doozy will not only transform an existing vending area but with a little more space we can transform it into this...

A full unmanned Doozy Cafe, complete with handmade furniture

Yep, we made this!
